

M3.4 Evidence Collection

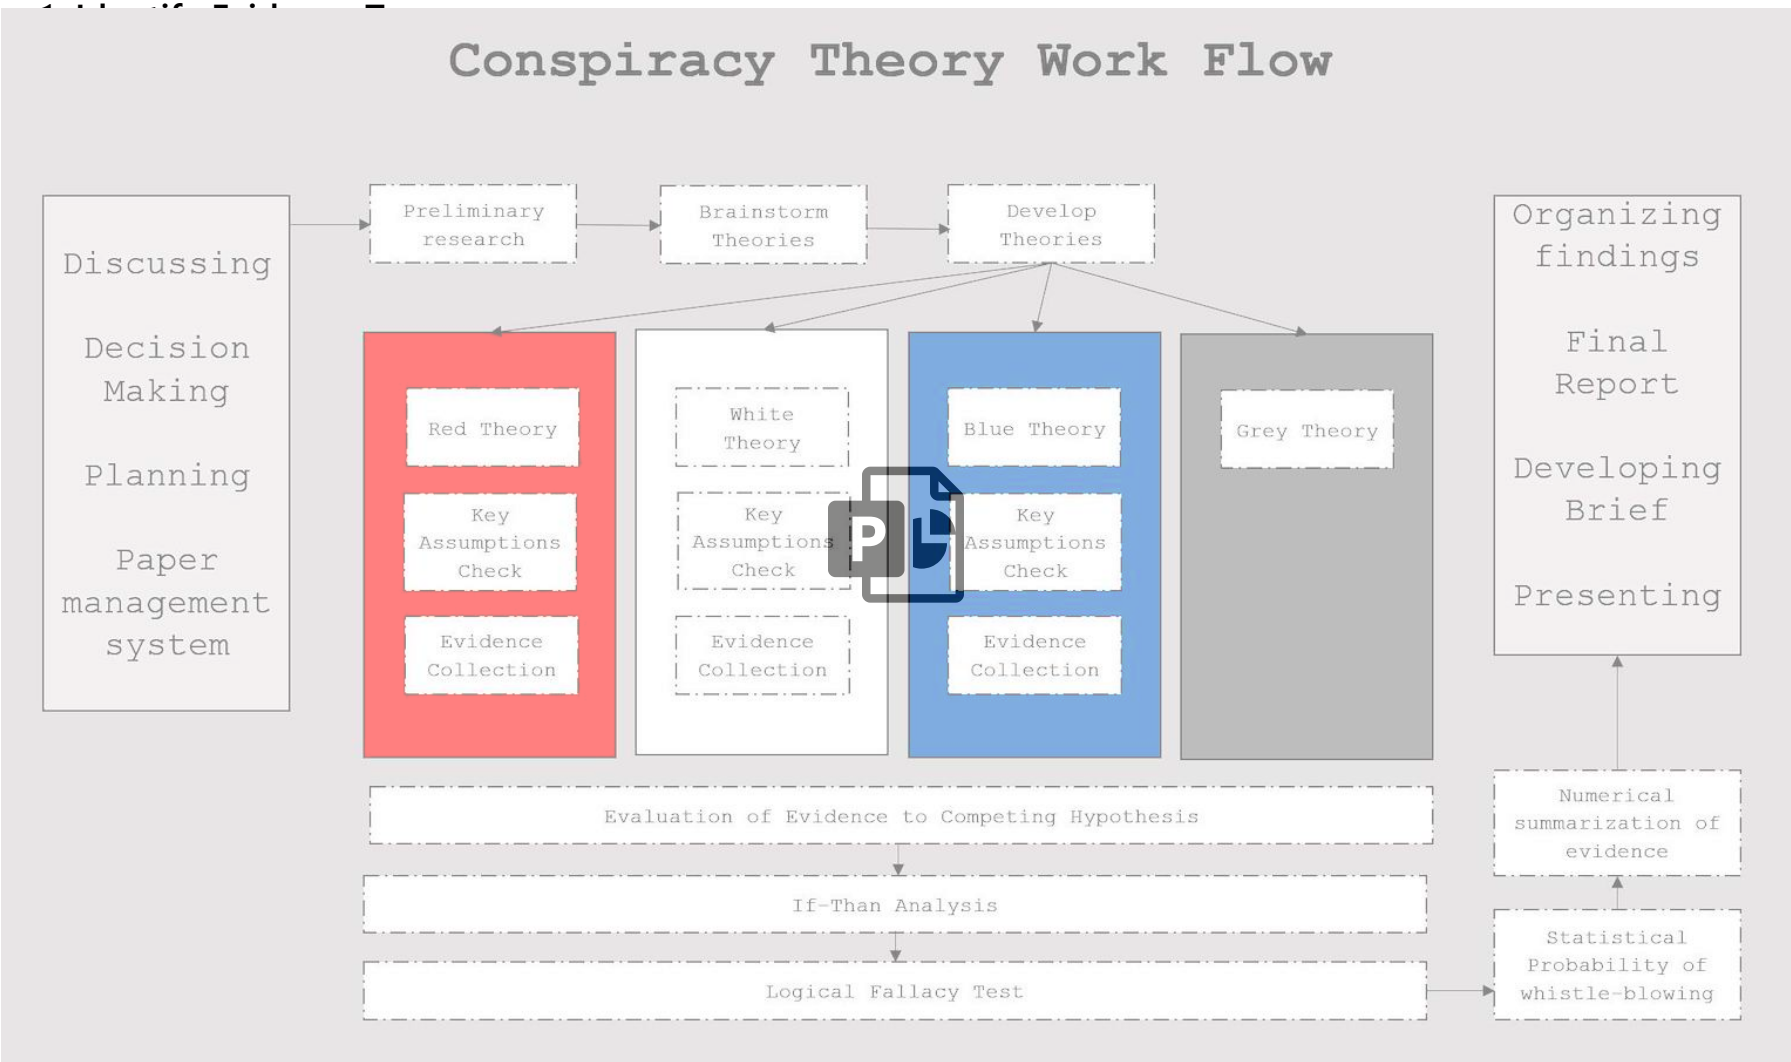

Boyce, Jacob
Social Studies_7-9

Evidence Collection Phase for the Analysis of Competing Hypotheses (ACH)

Purpose of Evidence Collection in ACH: The evidence collection phase in the Analysis of Competing Hypotheses is a crucial step designed to rigorously test and support your hypotheses. By meticulously gathering and assessing evidence, you can determine the strength and validity of your competing theories, ultimately guiding you towards the most plausible conclusion.

Evidence Collection Process

Steps for Effective Evidence Collection:

evidence to validate or challenge these assumptions.

- This step ensures that your analysis does not rest on unexamined or faulty premises, thereby enhancing the analytical rigor.

assumptions impact your conclusions?

- **Group Work in Evidence Collection:**
  - How can working in a group improve the process of collecting and analyzing evidence? What challenges might you face while working with others on this task?
- **Reflection on the Process:**
  - After collecting and analyzing evidence, what would you do differently in the next investigation? What lessons have you learned about the importance of thorough and critical examination of evidence?
